“Zipper Installation for Core Lining” - Step 37

Zipper width really doesn't matter EXCEPT in the case of the Expander :

If you are using a zipper with a 1-3/16" wide tape, (like the one in the photo on the left), then align zippertape with fabric edge of Expander as shown.

BUT, if your zippertape is only 15/16" wide tape, (like the one in the photo on the right), then you need to align the zippertape 1/8" AWAY FROM fabric edge, as indicated by arrow above).
